1.INTRODUCTON

1.1 Project Overview:

This project is based on an expense and income tracking system. This project aims to create an easy, faster and smooth tracking system between the expense and the income .This project also offers some opportunities that will help the user to how to manage the expenses in efficient way and also set have an option to set a limit for the amount to be used for that particular month. So, for the better expense tracking system, we developed our project that will help the users a lot.

1.2 Purpose :

An expense tracking app is an exclusive suite of services for people who seek to handle their earnings and plan their expenses and savings. When you track your spending, you know where your money goes and you can ensure that your money is used wisely. Tracking your expenditures also allows you to understand why you're in debt and how you got there. This will then help you design a be fitting strategy of getting out of debt. Many people in India live on a fixed income, and they find that towards the end of the month they don't have sufficient money to meet their needs

2.Literature Survey

2.1 Existing Problem :

In existing, we need to maintain the Excel sheets, CSV files for the user daily, weekly and monthly expenses and there is no as such complete solution to keep a track of its daily expenses easily. To do so a person as to keep a log in a diary or in a computer system, also all the calculations need to be done by the user which may sometimes results in mistakes leading to losses. The existing system is not user friendly because data is not maintained perfectly. A writing audit is a study of insightful sources on a particular research. We found various similar products that have already been developed in the market. Unlike all those products, Personal Expense tracker (PET) provides security and graphical results. We provide the user to enter their wish-list before any purchase. It generates notifications to notify user about their money management and put an limit to weekly, monthly, expenses.

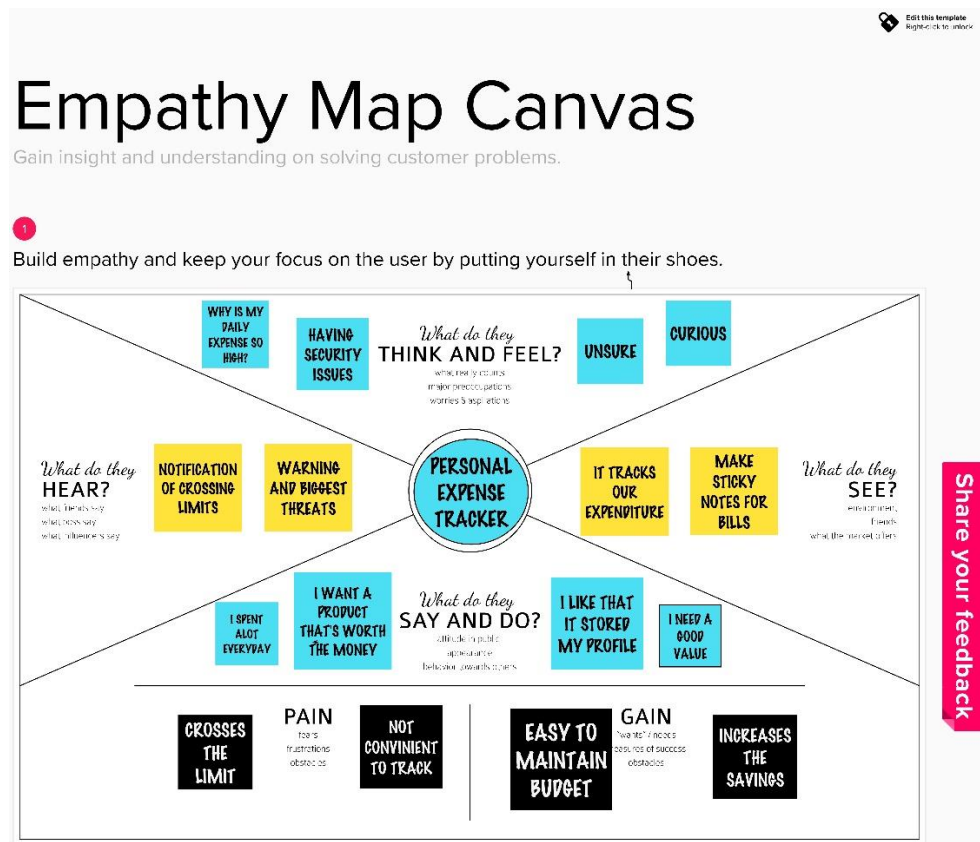

2.2 Problem Statement Definition :

Every earning people are mostly obsessed at the end of the month as they cannot remember where all of their money have gone when they have spent and ultimately have to sustain in little money minimizing their essential needs. There is no as such complete solution present easily to keep track of its daily expenditure easily and notify them if they are going to have money shortage. Personal finance applications will ask users to add their expenses and based on their expenses wallet balance will be updated which will be visible to the user. Also, users can get an analysis of their expenditure in graphical forms. They have an option to set a limit for the amount to be used for that particular month if the limit is exceeded the user will be notified with an alert. the main purpose of our application is to track the user's expenses.

3 .Ideation and Proposed Solution

3.1 Empathy Map Canvas :

An empathy map canvas helps brands provide a better experience for users by helping teams understand the perspectives and mindset of their customers. Using a template to create an empathy map canvas reduces the preparation time and standardizes the process so you create empathy map canvases of similar quality

Ideation and Proposed Solution

3.2 Ideation and Brainstorming :

Brainstorming is a group activity where everyone comes together to discuss strategies for growth and improvement. You can exchange ideas, share important information and use these meetings as informal catch-up sessions with your co-workers. Brainstorming combines a relaxed, informal approach to problem solving with lateral thinking. It encourages people to come up with thoughts and ideas that can, at first, seem a bit crazy. Some of these ideas can be crafted into original, creative solutions to a problem, while others can spark even more ideas.

Ideation is the process where you generate ideas and solutions through sessions such as Sketching, Prototyping, Brainstorming, Brainwriting, Worst Possible Idea, and a wealth of other ideation techniques. Ideation is also the third stage in the Design Thinking process.

As you can see, ideation is not just a one-time idea generation or a brainstorming session. In fact, we can divide ideation in these three stages: generation, selection, and development.

i.

Template

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

 10 minutes to prepare

 1 hour to collaborate

 2-8 people recommended

Share template feedback

➔

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

 10 minutes

A

Team gathering

Define who should participate in this session and send an invite. Share relevant information or pre-work ahead.

B

Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.

C

Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

Open article

➔

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

 5 minutes

PROBLEM

Expense tracking is essential in successful financial management. By knowing where our money goes, we can effectively sort out our financial priorities based on our budget. This will help us save for our financial goals and achieve the lifestyle we want.

Key rules of brainstorming

To run an smooth and productive session

 Stay in topic.

 Encourage wild ideas.

 Defer judgment.

 Listen to others.

 Go for volume.

 If possible, be visual.

Need some inspiration?

See a 91 sheet version of this template so you can get started.

Ideation and Proposed Solution

ii.

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

⌚ 10 minutes

TIP

You can select a sticky note and hit the search button to search for similar words!

Byron Rithika

1. Reduce the number of steps in the process.

Aishwarya J

1. Reduce the number of steps in the process.

Deepika A

1. Reduce the number of steps in the process.

3

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

⌚ 20 minutes

TIP

Add customer feedback to sticky notes if you have it, to help you identify what is most important, and categorize it into sub-groups.

GROUP 1

1. Reduce the number of steps in the process.

GROUP 2

1. Reduce the number of steps in the process.

iii.

The diagram illustrates the steps of the greedy algorithm for the knapsack problem. It shows four stages of the process:

- Initial State:** A knapsack with a capacity of 10 is shown. There are three items: Item 1 (weight 2, value 1), Item 2 (weight 3, value 4), and Item 3 (weight 4, value 3). The value-to-weight ratios are 0.5, 1.33, and 0.75 respectively.
- Selection:** The item with the highest value-to-weight ratio (Item 2) is selected.
- Adding Item:** Item 2 is added to the knapsack. The remaining capacity is now 7.
- Repeating the Process:** The process is repeated. Item 1 is added next because it has the highest value-to-weight ratio among the remaining items. The remaining capacity is now 5.

Ideation and Proposed Solution

3.3 Proposed Solution :

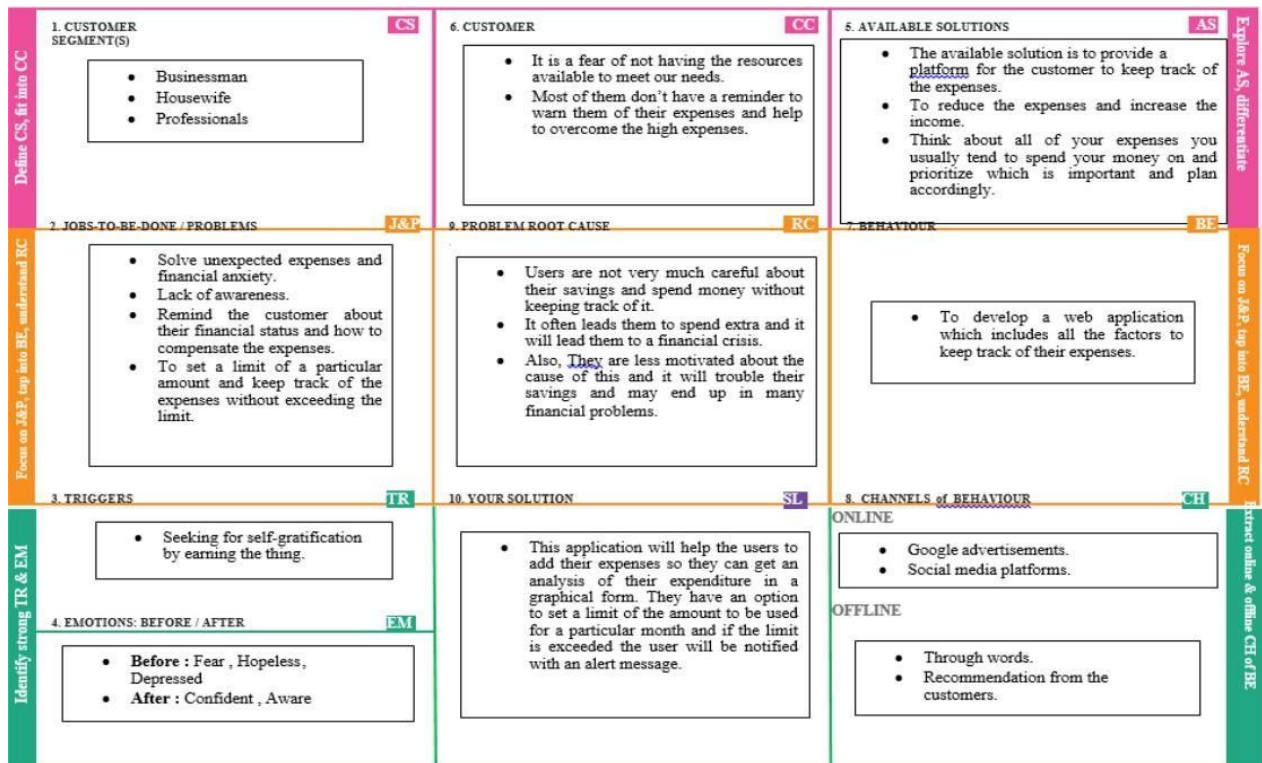

Expense Tracker is going to be a mobile application so that It can be accessed any time required. This application will have a two-tier architecture: first one is the database tier, where all the data and financial data will be stored. Second it will be the user interface which will support the application user communicate with the system and also store Information in the database. The proposed system should operate offline so it can be accessed at any time without internet availability. The proposed system should provide different categories for the user to select from and they can enter the amount and mode of payment. This system should be able to analyze the information, provide analytics on which category did the user spent most of their money. The proposed system should provide a user interface where the user could store and observe their past expenses. To develop a personal finance application which allows users to add their expenses and based on their expense wallet balance will be updated and displayed. Also, users can get an analysis of their expenditure in graphical forms. They have an option to set a limit for the amount to be used for that particular month and if the limit is exceeded the users will be notified with an email alert

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	<p>Keeping Proper track of our daily expenses is becoming challenging in today's world.</p> <p>Without the proper money management knowledge people overspend on their wants instead of focusing on their needs.</p> <p>Especially when using online applications for purchasing their requirements consumers tend to over spend. This problem leads to improper distribution of their daily expenses. Without proper knowledge on managing money poor are becoming poorer and rich are becoming richer.</p>

2.	Idea / Solution description	An attempt to develop an app to manage our daily expenses and give us insights on managing our money would be a good idea. This app will be able to track expenses on various online platforms and apps. The app can help with proper budgeting and give alerts when the user over spends or crosses the limit previously set by them. This will lead to proper spending habits and make them knowledgeable about money management. IBM cloud can be used to handle the data safely.
3.	Novelty / Uniqueness	The speciality for the app will be the data security with IBM cloud being used for data storage and this app genuinely helps with the money management. The proper and personalized budgeting of the user's money leads them to trust the app and they wouldn't have to worry about their expenditure on unnecessary things.
4.	Social Impact / Customer Satisfaction	People using the app will be becoming better at their spending habits and will be able to save more than their peers who are not using the app. This application aims to improve the users' savings sustainably and steadily which leads them to trust the app without worrying about their money
5.	Business Model (Revenue Model)	This application leads to a business model, the user can be suggested the right products to buy based on their budget and this can lead to targeted business approaching the right consumers. The model leads to systematic and structured expenses of the user and also leads to predictive analysis of the future expenses of the consumer. This model makes the user more careful with expenses as they are provided with the money management insights
6.	Scalability of the Solution	This application can be created as a multi user model nationwide. The model can also be modified based on the country's law on applications and data security which leads to international implementation of this application by maintaining proper gateway rules. This app when developed for multiple nations can be modified to their requirements. The app can also be modified for a particular group of people or organization

--	--	--

3.4 Problem Fit:

4. Requirement Analysis

4.1 Functional Requirments :

1. Dashboard panel

The system shall authenticate the user and then display panel based on the particular identified user.

2. Add bill

The system shall allow the user to add bill details based on the user's need to track the type of expenses.

3.Expense planner

The system should graphically represent the current month figure based current month expenses and user's own budget share.

4. Expense tracker

The system should graphically represent the yearly expense numbers in form of report

5.Add notes

The system shall allow users to add notes to their expenses.

4.2 Non-Functional Requirments:

1. Usability

There is a consistency in all the modules and webpages. To ease the navigation there is a back tab to provide access to previous page. There is proper instruction on each page.

2. Reliability

Each data record is stored on a well-built efficient database schema. There is no risk of data loss. The internal evaluation of data is well coded.

3. Supportability

The system is well built to support any machine. Maintainability of the system is easy.

4. Performance

In order to ease the accessibility, the types of expenses are categorized along with an option to name on the own. Throughput of the system is increased due to light weight database support.

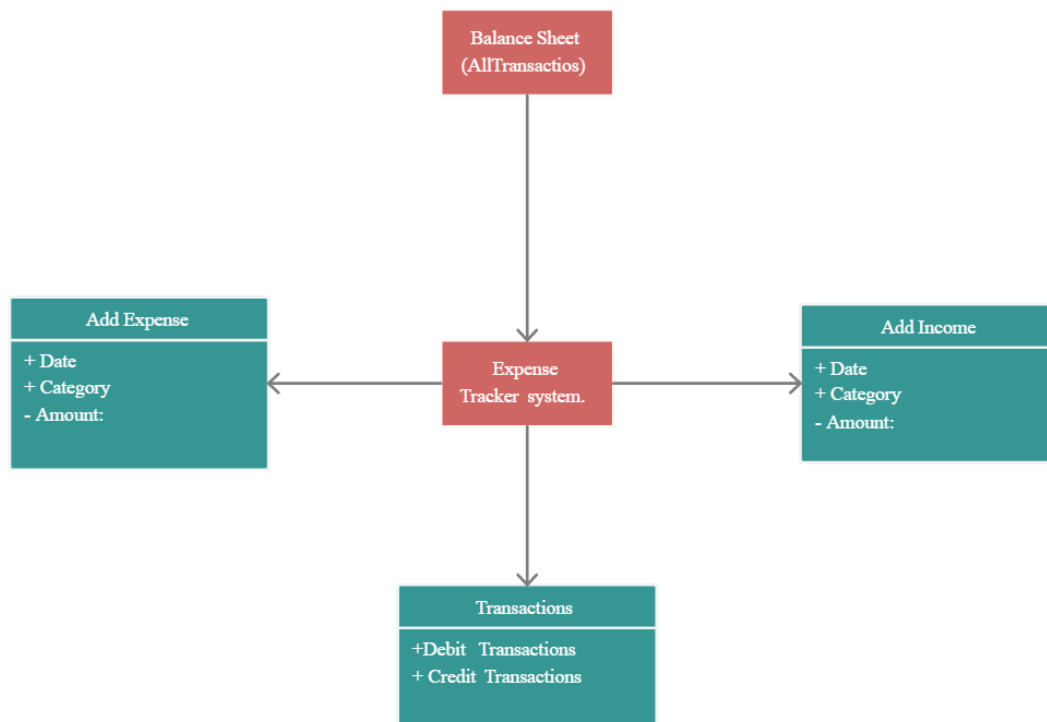

5. Availability

The system is available all the time, no time constraint.

5. Project Design

5.1 Data flow Diagrams :

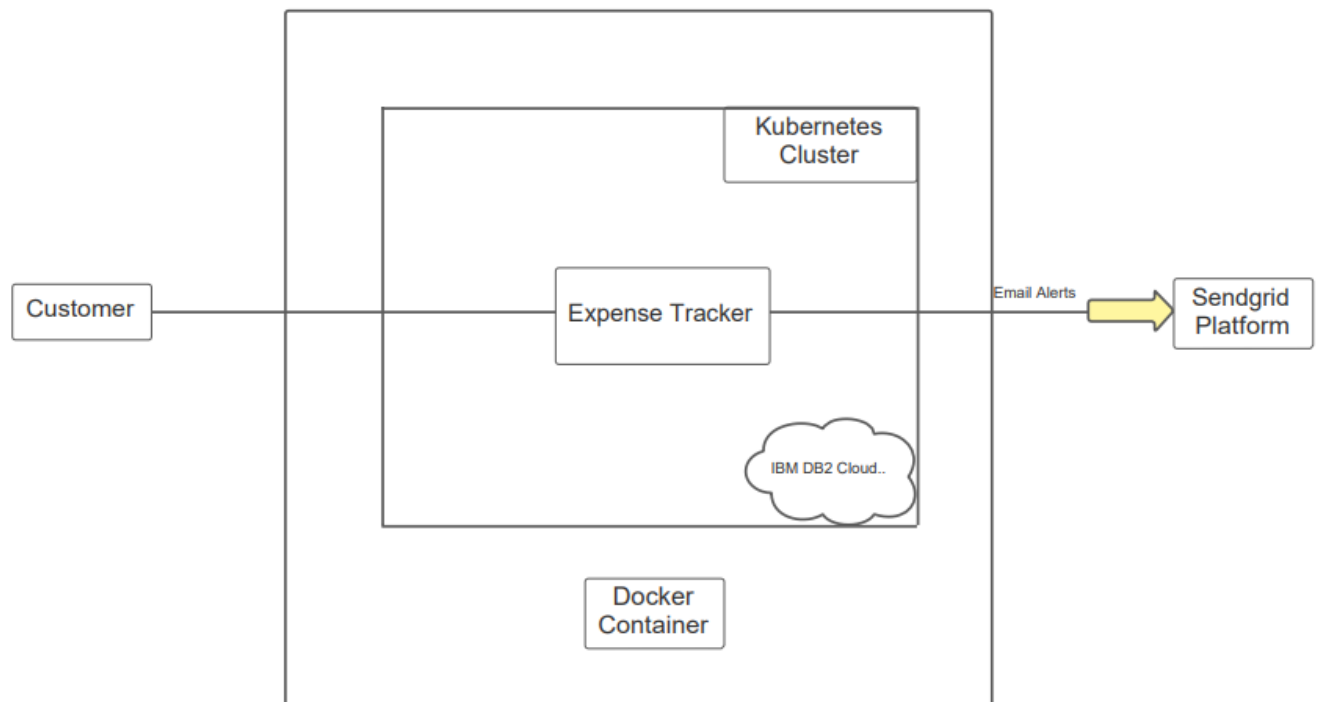

A data flow diagram (DFD) is a graphical or visual representation using a standardized set of symbols and notations to describe a business's operations through data movement. Data flow diagrams provide a straightforward, efficient way for organizations to understand, perfect, and implement new processes or systems. They're visual representations of your process or system, so they make it easy to understand and prune.

5.2 Solution & Technical Architecture:

Technical Architecture (TA) is a form of IT architecture that is used to design computer systems. It involves the development of a technical blueprint with regard to the arrangement, interaction, and interdependence of all elements so that system-relevant requirements are met.

PERSONAL EXPENSE TRACKER APPLICATION -- SOLUTION ARCHITECTURE

6. Project Planning & Scheduling

6.1 Sprint Plainning & Estimation:

Sprint	Functional Requirement (Epic)	User Story / Task
Sprint 1	Registration	As a user, I can register for the application by entering my email,password, and confirming my password.
		As a user, I will receive confirmation email once I have registeredfor the application
	Login	As a user, I can log into the application by entering email &password
	Dashboard	Logging in takes to the dashboard for the logged user.
Sprint 2	Workspace	Workspace for personal expense tracking
	Charts	Creating various graphs and statistics of customer's data
	Connecting to IBM DB2	Linking database with dashboard
		Making dashboard interactive with JS

Sprint-3		Wrapping up the server side works of frontend
	Watson Assistant	Creating Chatbot for expense tracking and for clarifying user'squery
	SendGrid	Using SendGrid to send mail to the user about their expenses
		Integrating both frontend and backend
Sprint-4	Docker	Creating image of website using docker/
	Cloud Registry	Uploading docker image to IBM Cloud registry
	Kubernetes	Create container using the docker image and hosting the site
	Exposing	Exposing IP/Ports for the site

6.2 Sprint Delivery Schedule:

A sprint schedule is a document that outlines sprint planning from end to end. It's one of the first steps in the agile sprint planning process—and something that requires adequate research, planning, and communication.

Sprint	Total Story Points	Sprint Start Date	Sprint End Date	Story Points Collected	Sprint Release Date
Sprint 1	20	23 Oct	27 Oct	20	28 Oct
Sprint 2	20	30 Oct	02 Nov	20	03 Nov
Sprint 3	20	06 Nov	10 Nov	20	11 Nov
Sprint 4	20	13 Nov	18 Nov	20	19 Nov

6.3 Reports from JIRA:

JIRA is a software application used for issue tracking and project management. The tool, developed by the Australian software company Atlassian, has become widely used by agile development teams to track bugs, stories, epics, and other tasks

i.

The screenshot shows the Jira Software interface for the 'Personal Expense Tracker Application' project. The 'Backlog' view is selected in the left sidebar. The main area displays a list of issues grouped by sprints. The first sprint, 'APICS Sprint 1' (24 Oct - 29 Oct), contains three issues: 'APICS-1 Registration' (In Progress), 'APICS-2 Confirm Registration' (To Do), and 'APICS-3 Login' (To Do). The second sprint, 'APICS Sprint 2' (31 Oct - 5 Nov), contains one issue: 'APICS-6 Graphical view of the Expenses' (To Do). The third sprint, 'APICS Sprint 3' (7 Nov - 12 Nov), is currently selected and empty. The fourth sprint, 'APICS Sprint 4' (14 Nov - 19 Nov), is also empty. A 'Quickstart' button is visible in the bottom right corner. The browser address bar shows the URL: 'pnt2022tmid15641.atlassian.net/jira/software/projects/APICS/boards/2/backlog'.

ii.

The screenshot shows the Jira Software interface for the 'Personal Expense Tracker Application' project, displaying the 'All sprints' view. The left sidebar shows the 'Board' view selected. The main area displays a Kanban board with three columns: 'TO DO 5 ISSUES', 'IN PROGRESS 1 ISSUE', and 'DONE'. The 'TO DO' column contains five issues: 'Confirm Registration' (APICS-2), 'Login' (APICS-3), 'Dashboard - set budget limit and add expenses' (APICS-4), 'Send Email When the expense exceeds limit' (APICS-5), and 'Graphical view of the Expenses' (APICS-6). The 'IN PROGRESS' column contains one issue: 'Registration' (APICS-1). The 'DONE' column is empty. A 'Quickstart' button is visible in the bottom right corner. The browser address bar shows the URL: 'pnt2022tmid15641.atlassian.net/jira/software/projects/APICS/boards/2'.

iii.

The screenshot shows the Jira Roadmap interface for the 'Personal Expense Tracker Application' project. The left sidebar contains navigation options under 'PLANNING' (Roadmap, Backlog, Board) and 'DEVELOPMENT' (Code, Project pages, Add shortcut, Project settings). The main area displays the 'Roadmap' view with a timeline from September to January 2023. A vertical orange line indicates the current date. The roadmap shows a single sprint starting in late October and ending in early November, with four tasks labeled 'APK-...' scheduled within it. The bottom of the screen shows the Windows taskbar with various application icons and system information like '29°C Cloudy' and '20:22 22-10-2022'.

Advantages

1. You have no control over your money If you don't check your spending and create a budget, you will have no control whatsoever on your money. Instead, money will control you, and you will either have perpetual lack of funds or you will end up steeped in debt. A money manager app helps you decide between short-term and long-term spending .

2. You have no financial goals If you are spending money frivolously, you will not have money to set financial goals. However, when you have a daily expense manager, you will be able to work with limited resources and use your money in a wise manner so that you can create financial goals and ensure you meet them.

3. You are unaware what is happening with your money If you are clueless about how much is your inflow and how much you are spending, you will not know at the end of the month what happened to your money. An expense tracker helps you figure out what is happening to your money, and whether you can afford something you want.

4. You spend and save in a haphazard manner

If you don't have great financial management skills, you will not know how to categorize your expenses. However, tracking your expenses and budgeting them will help you become aware of how much you have to allocate to each expense category, and if you are short, you will be able to make adjustments with ease.

5. You have no clue about making your money work for you, In this day and age, when expenses are going through the roof, it has become crucial that you learn to make your money work for you so that you can create a nest egg for the future.

6. You don't have funds for emergencies Remember, emergencies come when you least expect. Hence, if you don't have money stashed away for a rainy day, you will end up borrowing from family and friends. This way you could get into debt that will be difficult to pay back due to your poor money management skills

Disadvantages

Your information is less secure, and probably being used and sold. If the service is free, then the product is you. Mint.com, like other financial apps, is a free service. They have to pay their bills somehow, so regardless of what their privacy policy may or may not say, just assume that your spending history and trends are going to be recorded and analyzed, by someone, somewhere. Now, you shouldn't have to worry about credit card fraud or identity theft, these companies are large enough and secure enough that you'll never have to worry about something like that. Just recognize that your information, most likely anonymous, will be used and potentially even sold. Personally, I have no problem with that, but if you do, then make sure you avoid these types of services. Automating everything to do with your finances can make you financially lazy. If your bills are paid automatically and your finances are track automatically, then what is there left for you to do? Not a lot, to be honest. So you might stop caring about what you're spending and where your money is going. Eventually you may look at your Mint data and realize that you've blown your budget over the last two months, but by then it is too late. So if you do choose to use this program, ensure that you are also being diligent in checking in on your finances. Set up a weekly or biweekly check for yourself to go through your finances and hit on all the important points

Conclusion

After making this application we assure that this application will help its users to manage the cost of their daily expenditure. It will guide them and aware them about there daily expenses. It will prove to be helpful for the people who are frustrated with their daily budget management, irritated because of amount of expenses and wishes to manage money and to preserve the record of their daily cost which may be useful to change their way of spending money. In short, this application will help its users to overcome the wastage of money
